EDUCATION

National Institute of Technology, Hamirpur

2022 – 2026

Bachelor of Technology in Computer Science

SKILLS

Languages	C/C++, Python, JavaScript, TypeScript
Web Development	HTML, CSS, React, Next.js, Node.js, Express.js, REST APIs
AI & Machine Learning	LLMs, LLM Evaluation, Prompt Engineering, RAG, NLP, Scikit-learn
Databases	SQL, MongoDB, Database Design
DevOps & Tools	Git/GitHub, Linux/Bash, AWS, Postman
Coursework	OS, Computer Networks, DBMS, OOP, DSA

EXPERIENCE

AI Model Evaluator

Jun 2026 – Present

DataAnnotation

USA (Remote)

- Evaluated **frontier AI models** (Claude Code v2.1.106/2.1.107, OpenAI Codex) on rubric-based criteria – **thoroughness, task success, instruction following, code quality** – giving **unbiased**, detailed feedback to improve model performance.
- Conducted **autonomous-mode** evaluations of **1–2 hour long-horizon agentic sessions**, assessing model reasoning, intermediate decisions, and end-to-end code changes for correctness and reliability.
- Designed **adversarial opening prompts** and ran **interactive multi-turn evaluations (3–5+ turns)**, stress-testing frontier **LLMs** and scoring the correctness and helpfulness of each response.
- Authored structured **qualitative and quantitative assessments** used to benchmark and compare model versions, contributing to **instruction-following** and reasoning improvements across releases.

SDE Intern

May 2025 – Jun 2025

SONI STACC TECHNOLOGY PRIVATE LIMITED

Remote

- Implemented **MERN-stack authentication & authorization**, reducing server overhead by **30%** through stateless session management.
- Built **JWT-based auth** with **bcrypt hashing**, securing API endpoints and decreasing unauthorized access attempts to **zero**.
- Developed **RBAC middleware** enforcing **route-level permissions**, successfully restricting and managing access across **2 distinct user roles**.
- Improved client auth flow using *React hooks* and *Axios interceptors*, reducing token refresh errors by **40%** and ensuring seamless user sessions.

PROJECTS

GoNomad – Vehicle Rental Platform [\[GitHub\]](#)

MongoDB, Express.js, React, Node.js, ImageKit, Groq API

- Built a scalable **MERN-stack** car rental platform with **JWT authentication** and optimized **REST APIs**, successfully handling **100+** concurrent test requests efficiently.
- Designed a robust booking system using **date-overlap logic**, achieving **0% booking conflicts** during load testing and ensuring **race-condition safe** transactions.
- Integrated AI-powered car descriptions via the **Groq API**, reducing listing creation time by **80%**.
- Optimized media delivery via **ImageKit CDN** with **WebP compression**, cutting image payload by **70%** and doubling load speed.

Resolving Idioms for Indic Machine Translation [\[GitHub\]](#)

Python, Groq API, Llama 3.3/4, Kimi K2, LaBSE, Scikit-learn, RAG

- Engineered a **multi-model AI pipeline** via *Groq API* to extract cultural features across a dataset of **500+ Hindi idioms**.
- Applied **LaBSE multilingual embeddings** and cosine similarity, filtering semantic noise and improving retrieval relevance.
- Built an **ensemble aggregation** model using *Scikit-learn*, boosting overall translation accuracy and logic preservation.

ACHIEVEMENTS

- Solved **500+ Data Structures & Algorithms (DSA)** problems across LeetCode, GFG, and Codeforces.
- Recognized as a **Top Performer (Ranked 2)** in CSEC's **Codeforces Contest**.
- Led **Hack on Hills** All-India hackathon: **2000+** registrations, **40+** teams.
